

# VSGi Cloud Video Service

## Desktop and Mobile HD Video Conferencing in the Cloud

VSGi Cloud Video Service is a cloud hosted and managed multipoint video conferencing service that allows users to meet and collaborate with colleagues and customers in stunning 1080p HD video from any device - without any infrastructure or equipment to buy, install, or manage.

Cloud Video Service is delivered on a per user basis at a low monthly fee, virtually eliminating CAPEX and OPEX, making it super budget friendly. There are no equipment fees, no setup fees, and no user license download fees. On a per user basis, Cloud Video Service is a fraction of the cost of most cell phone plans.

## Fully Mobile & Interoperable / Bring Your Own Device (BYOD)

An average employee has approximately 3 devices connected to their company's network - and most are video enabled. VaaS works seamlessly on PC's, Macs, iPhones, iPads, Android phones / tablets, or traditional video endpoints (H.323 or SIP), offering nearly instant video enablement for most employees.

## Cloud Based, Secure, and Fully Redundant

The Cloud Video Service infrastructure is hosted in The VSGi Data Center, which was designed to safeguard mission critical data with the highest levels of security and operational reliability - leveraging uninterruptible power supplies, backup generators, and redundant fiber connections.

## Benefits of VSGi Cloud Video Service

**Minimal CAPEX** - No network infrastructure or endpoints to buy. No setup fees, no download fees.

**Minimal OPEX** - No on-site resource necessary to install, manage, maintain hardware and video network.

**Ease of Use** - Launch 1080p HD business-class video conferencing and content sharing in just one click.

**Directories & Presence** - Users have instant familiarity with the interface, leading to higher adoption.

**Scalability** - It's super easy to add users as your organization grows. Add 1 user or 100 - no problem.

**Audio, Room System Ports, and Virtual Meeting Room Services** - VSGi Cloud Video Service is flexible and customizable based on your needs. Add on for the ultimate Cloud Video deployment.
